

Know your duty. Do the work. Keep the evidence.

A clearer CDM project process.

Bring duties, design decisions, actions and evidence together in one workspace. Understand the next step and keep a useful record of the work.

FOR ARCHITECTURAL PRACTICES, DESIGNERS AND CDM PRINCIPAL DESIGNERS

Project screening

Record client type, contractor strategy and the appointment position. Expandable guidance explains why key questions matter.

Client duties and appointments

Prepare drafts, then record actual issue events and acknowledgements separately, with dates, recipients and supporting references.

Pre-construction information

Track relevant information, identify gaps and assign owners and review dates. Link evidence to the PCI item.

Design risks and changes

Record design decisions, review changes and keep significant residual information visible for coordination with the wider team.

Actions and collaboration

See outstanding actions across projects. Give colleagues owner, admin, editor or viewer access appropriate to their role.

Evidence and handover

Connect files to project records and build Health & Safety File tracking and a useful closeout record.

Keep the record and supporting files connected.

Upload PDF, PNG or JPEG evidence (currently up to 4 MiB per file). Evidence uses private storage and authorised access. Project reports and CSV/JSON exports bring records together; printable reports use the browser print function.

Clear scope. Professional judgement stays central.

The core workflow supports CDM 2015 in Great Britain. England Building Regulations templates are separate drafts, not a complete Building Regulations workflow. CDMlogic does not certify compliance, determine competence or submit F10 notifications to HSE.

Currently in pilot. General availability and commercial plans are not yet announced.
